3.42 Convert Unapplied Receipts to Credit Memos Report (R03B620)

From the Period End Processing menu (G03B21), select Convert Unapplied Receipts to Credit Memos.

You may need to convert unapplied receipts to credit memos in order to issue refund checks to customers. For example, you may need to create a refund check if a customer overpays.

Although unapplied receipts represent a credit to the customer, the system does not allow you to process unapplied receipts (RU document type) in the Credit Reimbursements program (R03B610). The system does not process the RU document type because unapplied receipts are generated from a receipts program which creates additional records in the Receipts Header (F03B13) and Receipts Detail (F03B14) tables. Therefore, to reimburse a customer for an unapplied receipt, you must close the unapplied receipt and create a credit invoice to replace the unapplied receipt.

Follow these steps in sequential order:

1. Run the Convert Unapplied Receipts to Credit Memos program (R03B620). Use data selection to specify one or multiple unapplied receipts.

When you run the Convert Unapplied Receipts to Credit Memos program, the system converts unapplied receipt records in the F03B13 and F03B14 tables to credit memos in the Customer Ledger table (F03B11).

2. Run Credit Reimbursements program. You can run this program manually or use the processing options in the Convert Unapplied Receipts to Credit Memos program to run the program automatically.

When you run the Credit Reimbursements program, the system pays open credit memos and generates vouchers to reimburse to the customer.

You can reimburse unapplied receipts whether the receipt is posted or not posted.

Note:

The system does not pass the data selection from the Convert Unapplied Receipts to Credit Memos program to the Credit Reimbursements program. Therefore, if you set the processing option in the Convert Unapplied Receipts to Credit Memos program to run the Credit Reimbursements program automatically, you must set the data selection in the Credit Reimbursements program prior to running the Convert Unapplied Receipts to Credit Memos program.

3.43 Credit Reimbursement Report (R03B610)

On the Period End Processing menu (G03B21), select Generate Reimbursements.

In proof mode, use this program to print a list of eligible documents. The system generates a separate reimbursement record for each customer, company, and currency combination, and prints it on the report.

In final mode, use this program to process credit reimbursements by selecting documents from the list of eligible documents. The system:

- Creates a receipt in the Receipts Header (F03B13) and Receipts Detail (F03B14) tables to close the selected invoices.
- Creates a batch of receipts (batch type RB), which you must post.

When you post the receipt batch, the system debits the A/R trade account and credits the suspense account specified by the AAI item NC.

Changes the pay status on the invoices to P (paid).

 Creates a voucher in the Accounts Payable Ledger table (F0411) with a document type NO.

The system does not create vouchers with tax information from the credit memo.

Creates a batch of vouchers (batch type V), which you must post.

When you post the voucher batch, the system credits the A/P trade account and debits the suspense account specified by the AAI item NC.

5.28 Indexed Computations Compute And Print Report (R093021)

On the Allocations menu (G0923), select Indexed Computations Compute & Print.

After you review the indexed allocations and determine that they are correct, run this program.

In proof mode, the system prints a report that shows the entries that are created in final mode. Review the report to determine whether you need to make any changes to the allocation before running the program in final mode.

In final mode, the system:

- Reads balances or transactions, based on the allocation method, from one or more accounts.
- Multiplies each balance or transaction by the specified rate index.
- Creates journal entries with batch type D in the Account Ledger table (F0911).

For the balance allocation method, the system creates journal entries based on the balance of an account or a range of accounts. For the transaction allocation method, the system creates journal entries in a one-to-one ratio with the transactions that it reads.

- Calculates an offset to balance the resulting journal entries, if needed, and distributes the offset to a contra/clearing account.
- Increases the general ledger date incrementally according to the recurring frequency for the allocation, which ensures that the allocation is ready for future processing.

For the update allocation method, updates balances only in the Account Balances table (F0902) for ledger types other than AA.

Prints the Indexed Computations Journal report.

This report lists detailed allocation information and errors, such as invalid accounts and entries posted before cutoff (PBCO). Invalid accounts appear with *** on the report.

- Posts accepted transactions to the F0902 table.
- Changes the status of the journal entry batch to posted.
- Marks the detail lines of the journal entry as posted in the F0911 table.
- Sends electronic mail messages for transactions that are in error.

On the Organization & Account Setup menu (G09411), select Copy Accts to Business Units. The system submits the report when you click OK on the Copy Accounts to Business Units form.

After you create your model chart of accounts, you must review and correct it. Then you can create your actual chart of accounts by copying the object and subsidiary accounts that are assigned to a model business unit to your actual business units. This process saves time and ensures consistency throughout your account structure. You can copy:

- All or a range of object accounts from one business unit to another
- Object accounts at a given level of detail
- All or a range of object accounts from one business unit to multiple business units of the same business unit type
- All or a range of object accounts to a specific company or across all companies

6.1 Update Employee Profile Structure Types Report (R09E0150)

On the System Setup menu (G09E41), select Update Employee Profile Structure Types.

Use this batch program to update the structure type for one or more employee profiles. The structure type enables you to associate the employee profile with a distribution list of a group of employees. The system uses the distribution list when you set up approval workflows with multiple expense report approvals and approvals on several levels.

You can use this program to generate an integrity report to verify structure types in current employee profile records. Run the program in proof mode for a set of employee profile records, specify the current structure type in the processing options

and set the print processing option to print only exceptions. You might want to generate an integrity report when a distribution list has been changed since it was last assigned to employee profiles.

On the Financial Reports menu (G10), select Monthly Spreadsheet.

Use this report to examine trends in your company's financial activity. You can analyze actual and budget amounts for period-to-date and year-to-date. You can also show current period amounts with budget amounts for future periods.

The monthly spreadsheet rounds to the thousands. For example, if the amount is 2700, it rounds to 3000 and prints as 3. If you want a spreadsheet with different specifications, you can design your own by using the Report Design Aid tool.

The system uses information stored in the Account Balances table (F0902) for the monthly spreadsheet.

7.11 Account Structure Build Report (R10430)

On the Multi-Site Consolidation Setup menu (G1042), select Account Structure Build.

Before you can consolidate account balances, you must build the account structure that the system uses for the consolidation. This program reads the Account Master table (F0901) and creates the account structure that is based on the sequence that you define in the account structure. The system creates one record in the structure for each unique object and subsidiary combination.

The program can add records to an existing account structure, or it can create a new account structure. The system deletes the existing structure if you set the corresponding processing option to create a new account structure that has an existing structure name.

If you entered target object and subsidiary information in category codes, you can specify the codes in the corresponding processing option. The system uses the values to create the target object and subsidiary account information.

If you entered level of detail information in a category code, you can specify the code in the corresponding processing option. The system uses the value for the level of detail of the account structure.

7.13 Business Unit Structure Build Report (R10450)

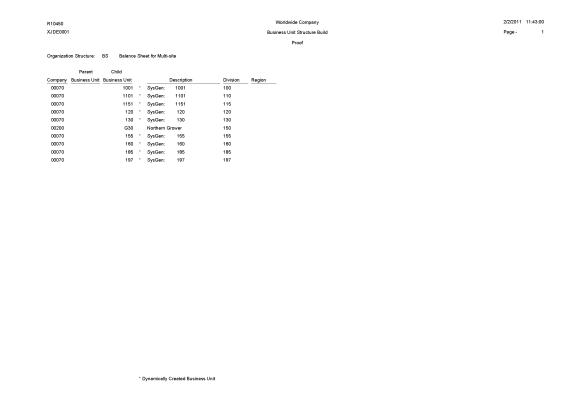

On the Advanced Organization Setup menu (G094111), select Organization Structure Build.

After you define your organization report structure in the Organization Structure Definition program (P0050B), run this program to build it.

You can run this program in proof or final mode. In proof mode, the system prints a report that shows the changes that occur when you run the report in final mode. In proof mode, any business units that are dynamically created appear on the report as a concatenation of category codes, regardless of the setting of the BU Creation processing options.

In final mode, the system dynamically creates business units either by using next numbers or by concatenating category codes, depending on the setting of the BU Creation processing options. In final mode, the system updates the Organization Structure Master File table (F0050).

Review the Business Unit Structure Build report (R10450):

7.14 Journalize Consolidation Balances Report (R10480)

On the Multi-Site Consolidation menu (G1021), select Journalize Consol. Balances.

After you receive the multisite consolidations at the target company, you should run integrity reports to ensure that the data that you received is accurate. Use this program to create journal entries for the summarized account balances that were received from the source company. These journal entries are based on the difference from one consolidation batch to another.

When you run this program, the system reads the Multi-Site Consolidation Transfer File Header (F1001), Multi-Site Consolidation Transfer File (F1002), and Multi-Site Consolidation Transfer File - Category Codes (F1003) tables and creates journal entries in the Journal Entry Transactions - Batch File table (F0911Z1).

You can run this batch program in proof or final mode. In proof mode, the system prints a report of the journal entries, but does not update the F0911Z1 table. In final mode, the system creates the journal entries in the F0911Z1 table and, based on a processing option, prints a report of the journal entries.

The report shows the journal entries that were created for the summarized balances from the source company by source system ID and batch number. It also shows batch totals.

Note: This reports guide discusses reports that are commonly used in the JD Edwards EnterpriseOne system. This reports guide does not provide an inclusive list of every report that exists in the system.

This guide is intended to provide overview information for each report. You must refer to the appropriate JD Edwards EnterpriseOne implementation guide for complete report information.

10.1 Post to Cost Analyzer Balances Report (R1602)

On the Cost Analyzer menu (G1612), select Post to Cost Analyzer Balances.

When you run this report, the system uses transactions from the Account Ledger table (F0911) to update the Cost Analyzer Balances table (F1602) for the requested view and fiscal year. Based on information in the cost analyzer view structure, this program creates transactions in the F1602 table, using information in the F0911 table. To allow error detection and correction of journal entry transactions before you post them to the F1602 table, post the transactions to the Account Balances table (F0902) first.

On the Reporting menu (G1625), select Trial Balance by Object Account for Cost Object.

Use this report to verify the accuracy of individual ledger account balances and your overall ledger. This report consolidates object accounts across many business units.

Use this report to specify whether to use information from the Account Ledger table (F0911) or from the Cost Analyzer Balances table (F1602). If you decide to use information from the Cost Analyzer Balances table (F1602), you must remember to run the Post to Cost Analyzer Balances program (R1602) before running the Trial Balance by Object Account for Cost Object. The Cost Analyzer Balances table (F1602) is updated only when you run the Post to Cost Analyzer Balances program.

The Customer Profitability report (R16028) uses an internal UBE called Profitability Reporting (R16028A). This report prints information from the Cost Analyzer Balances table (F1602). You must run the Post to Cost Analyzer Balances program (R1602) to update the F1602 table.

10.8 Purge Cost Analyzer Records Report (R1602P)

On the Cost Analyzer menu (G1612), select Purge Cost Analyzer.

To free up disk space or improve performance, you can delete old views or fiscal years that are no longer in use by purging records from the Cost Analyzer Balances table (F1602). If view specifications change or errors occur during the posting process, you can use this program to purge the information before re-posting transactions to a specific view. This program also unlocks the view to allow changes and resets the posted flag in the Account Ledger table (F0911) if desired.

If you set a processing option to bypass clearing the cost management posted code, you cannot regenerate transactions for the view. To re-create balances, you must use the Post to Cost Analyzer Balances program (R1602) to create a new record in the view for a new transaction in the F0911 table and rerun the purge program and leave the Bypass Update processing option blank.

The system clears the posted code on the new transaction and all prior transactions, thus enabling you to re-post the view for all transactions.
